Ministry of Health, Drug Plan and Extended Benefits Branch (DPEBB)
Funded Professional Services in Saskatchewan (updated August 2, 2026)

The Pharmacy Association of Saskatchewan has developed this chart to support pharmacy professionals in providing and billing services in alignment with their scope of practice. The chart is compiled by the Pharmacy Association of Saskatchewan to serve as a quick reference, and is not intended to replace Drug Plan and Extended Benefits Branch (DPEBB) or the Saskatchewan College of Pharmacy Professionals (SCPP) policies abbreviated within. Notes summarize key details, but do not provide a comprehensive overview of any policies. It is expected that all pharmacists and pharmacy technicians will thoroughly review DPEBB and SCPP policies prior to providing any professional services. If any information contained within this document contradicts or does not align with that found within DPEBB or SCPP policies, refer directly to the policies or organizations for assistance and clarifications.

DPEBB policies: Pharmacy Professional Services Policies
SCPP policies and standards: Reference Manual - Saskatchewan College of Pharmacy Professionals

The chart focuses on funded services through the DPEBB and so scope of practice which is unfunded in Saskatchewan is not highlighted. A reminder that funding and scope are not mutual and pharmacist scope of practice may extend beyond that which is funded within the province (e.g. lyme disease prophylaxis or RSV prescribing). Where possible, requirements that are specific to DPEBB billing policy are separated from regulatory notes.

Funded Professional Services in Saskatchewan (updated August 2, 2026)

Level 2 Prescriptive Authority

Title	Description	Notes/Limits	Service Fee	PseudoDIN
Therapeutic Substitution (Advanced Prescribing A)	After a practitioner has provided a diagnosis and issued a prescription for the patient, a pharmacist may make one or subsequent therapeutic substitutions of drugs within the pharmacologic class	- Six (6) claims/365 days Must be submitted as a quantity of ONE (1) May be subject to change depending on circumstances All Saskatchewan residents with a valid Health Services Number are eligible for pharmacist prescriptive services under this program	$18.00	00951676
Regulatory Notes	Drugs - Schedule I, II, III, or unscheduled drugs (includes non-CDSA drugs monitored by the Prescription Review Program) - Pharmacists are **not permitted** to prescribe a therapeutic substitution for **biologic drugs, or any controlled substance** listed in the schedules of the *Controlled Drugs and Substances Act* - Therapeutic substitution may only occur within a group of drugs that share a mechanism of action or chemical structure which is clinically appropriate based on the patient's medical history and the condition being treated Conditions - May only prescribe a therapeutic substitution after reasonably exhausting dispensing scope of practice and in the following circumstances: there is a disruption in the supply of the prescribed drug in Saskatchewan, the drug is officially withdrawn from the Canadian market or will be withdrawn in the next 3 months; the patient's safety is at risk, including side effects from the drug, and the prescriber cannot be reached in a reasonable time frame; the patient has a problem with adherence to the drug and would benefit from a different drug, or; there is an issue relating to the patient accessing the drug - Back-to-back pharmacist prescribing is permitted when the most previous prescription was an interim supply or the initial therapeutic substitution addressed a disruption in the supply and a subsequent therapeutic substitution is needed to address: the patient requests a switch back to the original drug prescribed; the original drug prescribed for the patient is more appropriate, or; the subsequent drug is no longer available. - A pharmacist prescribing under therapeutic substitution must honor the intent of the prescription as authorized by the practitioner. The therapeutic substitution must limit the quantity prescribed to not exceed the amount remaining or the duration for which the original prescription would have been valid and the therapeutic substitution must maintain the equivalent course of treatment. **Note: all prescribed medications (including schedule II, III, and unscheduled) must be entered into PIP** Documentation & Communication - Must document relevant clinical information on the PAR-Therapeutic Substitution (available on medSask webpage). - Must provide the PAR to the patients primary practitioner, and where appropriate, other practitioners involved in the patient's care			
Influenza Prescribing (when enacted)	Patients who test positive for influenza: - Pharmacists may prescribe influenza antivirals following the medSask algorithm unless otherwise communicated by the Registrar of SCPP. All eligible patients - When enacted by the Registrar of SCPP in consultation with the Chief Medical Officer, a pharmacist may prescribe for influenza antivirals following the medSask algorithm.	- Two (2) claims/180 days Must be submitted as a quantity of ONE (1) Residents of Special Care Homes (LTC) are not eligible for assessment under the program.	$25.00	00951322

PHARMACY ASSOCIATION OF SASKATCHEWAN

Ministry of Health, Drug Plan and Extended Benefits Branch (DPEBB)
Funded Professional Services in Saskatchewan (updated August 2, 2026)

Regulatory Notes	Drugs - Can only prescribe the drugs listed within the medSask guidelines for the specific condition. Conditions - Pharmacists must use the most current algorithm based medSask prescribing guidelines for the assessment, drug selection, quantity limits, documentation (i.e. PAR) and follow up for influenza prescribing. - Does not require an active professional relationship between a practitioner and patient before the pharmacist is authorized to prescribe. Documentation & Communication - Must use the medSask PAR specific to the approved condition. - Must provide the PAR to the patients primary practitioner, and where appropriate, other practitioners involved in the patient's care				
COVID-19 Prescribing (when enacted)	**Minor Ailment Fee: COVID-19 (Paxlovid™)** - When a pharmacist under the "Minor Ailment Program" issues a Paxlovid™ prescription. In effect unless otherwise communicated by the Registrar of SCPP.	Maximum to be determined in the event of an epidemic or pandemic being declared by the Chief Medical Officer.	$25.00	Minor Ailment (Paxlovid™)	00951375
	Paxlovid™ Ineligibility/Referral Assessment Fee: Pharmacist Prescriber - The patient initially meets eligibility criteria but upon further review of the patient's medical and/or drug history, the pharmacist determines that the patient is no longer eligible for Paxlovid™ or remdesivir. **OR** - The patient initially meets eligibility criteria but the pharmacist determines they are not eligible for "pharmacist prescribing," but rather require further escalation to the SHA Specialized Early COVID Therapeutics Team to receive either Paxlovid™ or other, more suitable treatment (e.g., remdesivir).	These fees are unique to Paxlovid™ and are not eligible in conjunction with any other DPEBB professional service programs.	$25.00	Ineligibility Pharmacist Prescriber	00951376
	Paxlovid™ Ineligibility/Referral Assessment Fee: Other Prescribers - Pharmacist assesses a prescription issued by another healthcare provider and determines that the patient is ineligible and/or requires escalation to the SHA Specialized Early COVID Therapeutics Team to receive Paxlovid™ or other, more suitable treatment (e.g., remdesivir).	These fees are unique to Paxlovid™ and are not eligible in conjunction with any other DPEBB professional service programs.	$25.00	Ineligibility Other Prescriber	00951377

Funded Professional Services in Saskatchewan (updated August 2, 2026)

Influenza Immunization Program (IIP)	The Influenza Immunization Fee (IIF) will be paid when a publicly funded influenza vaccine is administered to an eligible patient: - By an authorized immunizer according to SCPP bylaws or as identified by the Minister of Health or Designate - As part of the Saskatchewan Ministry of Health Influenza Immunization Program in accordance with the dates outlined by the Ministry of Health - Injection must take place within physical space of pharmacy, in congregate living, personal care homes, alternate sites (when the alternate location is not in use for other purposes) or home visits by an authorized immunizer. This may include supporting vulnerable populations (e.g. homeless shelters, foodbanks) Pharmacies are not authorized to administer publicly funded vaccine at businesses and other non-public access locations. Local Public Health and/or DPEBB should be contacted before each off-site influenza immunization service delivery, prior to setting up the service, to prevent duplication of services	1 claim per patient/180 days Must refer all patients without a valid Saskatchewan Health Service Number, children under the age of five, patients requesting thimersal-free vaccination, and out-of-province individuals to a local SHA public health office for influenza vaccination Vaccine administered must be captured electronically to the DPEBB using the product DIN under the prescriber who has completed Advanced Method Certification for Pharmacists The record of influenza vaccine product administered, which is part of the Influenza Immunization Fee (IIF), must be submitted for adjudication to DPEBB as a single transaction on the same day as the influenza vaccine administration	$18.00 **Exception:** Children 5 to 8 years of age who have no previously received influenza vaccine. Maximum of TWO (2) claims in a 150-day period per patient with a minimum interval of four weeks between claims. Fee covers supply costs (PPE, alcohol swabs, needle etc.), patient assessment, administration, monitoring, record keeping, drugs, transportation and supplies related to managing adverse events following injection. The Ministry pays the costs of the publicly funded influenza vaccine and its distribution.	No PseudoDIN – use the DIN of the approved influenza vaccine you are administering Submit $14.00 IIF as acquisition cost GSK FLUVIRAL 02420686 Sequiris FLUAD Enhanced 02362384
Regulatory Notes	Authorized Immunizers - Pharmacists with Advanced Method Certification (AMC) as outlined within SCPP bylaws - Pharmacist Interns, Extended Pharmacist Interns, and Licensed Pharmacy Technicians with Advanced Method Certification (for students or technicians respectively) as outlined by the Minister's Order - Other healthcare providers as enabled through their individual regulatory colleges Conditions - Pharmacists, pharmacy interns, and pharmacy technicians may only administer a drug by advanced method to patients 5 years and over - Must not administer by advanced method to a family member or themselves unless extenuating circumstances and there is no other alternative - Must maintain a readily accessible supply of epinephrine for emergency parenteral administration, diphenhydramine, cold compresses, and non-latex gloves (i.e. anaphylaxis management kit) - Must use precautions for infection prevention and control which include: following pharmacy policy and procedures, handling all body fluids and tissues as if they were infectious, performing appropriate hand hygiene, proper disposal of waste materials, and management of needle stick injuries Documentation & Communication - Must document informed consent and relevant clinical information and decision making in alignment with SCPP bylaws. Use of the medSask Screening and Consent Form supports meeting this requirement. - Must advise a prescriber or the patient's primary care provider that the drug has been administered. For publicly funded Schedule II vaccine programs, this may occur through PIP as the vaccine is required to be submitted on the date of administration - A pharmacist who administers a vaccine must provide the patient with a record of immunization (e.g. wallet card, booklet, electronic) - In the event of an adverse event, must submit the Adverse Event Following Immunization (AEFI) Form to the local public health office and provide follow up communication to the patient regarding the Medical Health Officer's recommendations. The AEFI form must also be maintained on the pharmacy patient profile for future reference.			

Ministry of Health, Drug Plan and Extended Benefits Branch (DPEBB)
Funded Professional Services in Saskatchewan (updated August 2, 2026)

COVID-19 Immunization Program	The COVID-19 Immunization Fee (CIF) will be paid when a publicly funded COVID-19 vaccine is administered to an eligible patient: - By an authorized immunizer according to SCPP bylaws or as identified by the Minister of Health or Designate - As part of the Saskatchewan Ministry of Health COVID-19 Immunization Program in accordance with the dates outlined by the Ministry of Health - Injection must take place within physical space of pharmacy, in congregate living, personal care homes, alternate sites (when the alternate location is not in use for other purposes) or home visits by an authorized immunizer. This may include supporting vulnerable populations (e.g. homeless shelters, foodbanks) Pharmacies are not authorized to administer publicly funded vaccine at businesses and other non-public access locations. Local Public Health and/or DPEBB should be contacted before each off-site COVID-19 immunization service delivery, prior to setting up the service, to prevent duplication of services	Billing limits will be adjusted, as needed based on the provincial administration recommendations. Must refer all patients without a valid Saskatchewan Health Service Number, children under the age of five, and out-of-province individuals to a local SHA public health office for influenza vaccination Vaccine administered must be captured electronically to the DPEBB using the product DIN under the prescriber who has completed Advanced Method Certification for Pharmacists The record of COVID-19 vaccine product administered, which is part of the COVID-19 Immunization Fee (CIF), must be submitted for adjudication to DPEBB as a single transaction on the same day as the COVID-19 vaccine administration	$18.00 Fee covers supply costs (PPE, alcohol swabs, needle etc.), patient assessment, administration, monitoring, record keeping, drugs, transportation and supplies related to managing adverse events following injection. The Ministry pays the costs of the publicly funded COVID-19 vaccine and its distribution.	No PseudoDIN – use the DIN of the approved COVID vaccine you are administering Submit $18.00 CIF as acquisition cost Moderna Spikevax (MDV) 02541270 Moderna Spikevax (PFS) 02557770
Regulatory Notes	Authorized Immunizers - Pharmacists with Advanced Method Certification (AMC) as outlined within SCPP bylaws - Pharmacist Interns, Extended Pharmacist Interns, and Licensed Pharmacy Technicians with Advanced Method Certification (for students or technicians respectively) as outlined by the Minister's Order - Other healthcare providers as enabled through their individual regulatory colleges Conditions - Pharmacists, pharmacy interns, and pharmacy technicians may only administer a drug by advanced method to patients 5 years and over - Must not administer by advanced method to a family member or themselves unless extenuating circumstances and there is no other alternative - Must maintain a readily accessible supply of epinephrine for emergency parenteral administration, diphenhydramine, cold compresses, and non-latex gloves (i.e. anaphylaxis management kit) - Must use precautions for infection prevention and control which include: following pharmacy policy and procedures, handling all body fluids and tissues as if they were infectious, performing appropriate hand hygiene, proper disposal of waste materials, and management of needle stick injuries Documentation & Communication - Must document informed consent and relevant clinical information and decision making in alignment with SCPP bylaws. Use of the medSask Screening and Consent Form supports meeting this requirement. - Must advise a prescriber or the patient's primary care provider that the drug has been administered. For publicly funded Schedule II vaccine programs, this may occur through PIP as the vaccine is required to be submitted on the date of administration - A pharmacist who administers a vaccine must provide the patient with a record of immunization (e.g. wallet card, booklet, electronic) - In the event of an adverse event, must submit the Adverse Event Following Immunization (AEFI) Form to the local public health office and provide follow up communication to the patient regarding the Medical Health Officer's recommendations. The AEFI form must also be maintained on the pharmacy patient profile for future reference.

Medication Assessment and Compliance Packaging Program (MACPP) **- Compliance Packaging (CP)**	Patients must meet MACCP criteria and need for compliance packaging identified by referring provider and/or confirmed during annual pharmacist assessment. A compliance package is prepared under a pharmacist's supervision for a specific patient/client and is so designed, or each compartment is so labeled, as to indicate the day and time, or period of time, that the contents are to be taken. It must be appropriate for the contents of each compartment to be administered at the same time	One (1) fee per weekly supply of compliance packaging Compliance packaging must meet the standards set out by the Saskatchewan College of Pharmacy Professionals All prescriptions, non-prescription medications, and OTC products (as appropriate) should be packaged in a 28-day or 35-day supply. Drugs listed on the 2-month and 100-day lists can be dispensed in 28-day or 35-day quantities. Billable only after annual medication assessment provided and billed for. The first compliance packaging fee must be submitted within 30 days of the annual medication assessment fee. Only billable for 1 year from the date of the most recent medication assessment (i.e. an annual medication assessment must be completed each year)	$6.25/weekly package (dispensed as total of 28 or 35 days of meds)	00951075
Regulatory Notes	Conditions - The pharmacy must have the appropriate physical space and equipment to provide compliance packaging, ensuring there is an area that is free of distractions - Staffing of the pharmacy must be sufficient to meet the additional time requirements necessary for the safe and organized preparation of the compliance packaging and clinical assessments - A standard work process must be developed - **Pharmacies must adhere to the standards and guidelines of SCPP including those outlined in the Compliance Packaging – Customized Patient Medication Packaging Guidelines** - No medications should be provided in prescription vials unless specifically requested by the patient, or it is not possible to provide in compliance packaging. Reference to these medications should be on the compliance label or medication grid. Labelling & Documentation - The packaging must clearly indicate: the name of the patient; name of the prescriber for each prescription; the prescription number for each prescription; the date dispensed; the name, strength, description and quantity of each prescription; the directions for each prescription; the name, address, and phone number of the pharmacy, and ; the name or initials of the pharmacist. - The pharmacist must ensure that the patient, or the patient's caregiver receives sufficient information to achieve optimal benefits from their medication. - A recording system must be in place and include: information confirming dosing specifications (time of day); the number of packages prepared; special drug integrity information, and; the complete patient medication list dispensed, including the date of dispensing and total quantities dispensed Dosing or drug changes from one month to the next should be documented either electronically or on a paper copy of the medication map to ensure any changes are made to subsequent compliance packaging. The date and the individual who made the change should be documented.

Witnessed Therapy

Title	Description	Notes/Limits	Service Fee	PseudoDIN
Direct Observed Therapy (DOT)	Witnessing the administration of approved Hepatitis C medications to eligible patients, to optimize patient medication adherence by reducing the risk of treatment interruption. Patients' prescriber must request DOT therapy on the prescription. The patient must be approved for EDS for an eligible medication indicated for the treatment of chronic hepatitis C infection.	Up to a maximum of 7. This is the number of times where the pharmacist witnesses the patient taking the drug that week. Must document witnessed admin on Appendix III	$3.50 ($24.50 per week maximum) billed weekly ****Patients must be a Saskatchewan Resident with a valid HSN who is not covered under Workers Compensation, Saskatchewan Government Insurance, NIHB, VA, or AF. Residents of Special-care homes are not eligible for the DOT fee.*	00951106
Regulatory Notes	The provision of DOT services fall under the general standards of care for pharmacy professionals in Saskatchewan and are generally considered part of entry-to-practice competencies of pharmacists. The DPEBB DOT program requirements align with ensuring pharmacists meet the standards of practice, however pharmacists are reminded to review relevant standards and policy before providing any new services. Conditions - Pharmacy professionals continuously assess the patient's unique needs, goals, and preferences related to health and well-being. - Pharmacy professionals release prescriptions to patients only after verifying the patient's identity and ensuring that the technical and clinical verifications and all required consultations have been completed to ensure the right patient received the right prescription and the right information. - Pharmacy professionals monitor patients and follow up with them to ensure that therapy continues to be optimal. - Services are provided in alignment with relevant pharmacy and professional practice standards (e.g. private consultation room standards, infection prevention and control standards, etc.) Documentation & Communication - To ensure consistency of care, pharmacists should ensure that documentation is retrievable and accessible in the patient record. This includes information regarding relevant health information collected, decisions and recommendations made, and any information/education given to the patient that is in addition to the accepted standard of care. - Communication to other health care providers should be clear and objective. - Pharmacists communicate changes in medication therapy to the patient, their primary healthcare provider, the prescriber, and others in the circle of care when appropriate.			
Methadone for Opioid Use Disorder	The DPEBB will pay community pharmacies when a pharmacist performs managed care and follow-up services to eligible patients in-person. The DPEBB will pay community pharmacies an off-site fee when the pharmacy employs a nurse to perform managed care and follow-up services to eligible patients in-person.	Up to a maximum of 7. This is the number of times the pharmacist witnesses the patient taking the drug that week. For both on and off-site managed care fee for face-to-face interactions between the patient and the pharmacist per week.	$7.50 per witness (max $52.50 a week) billed weekly ****Patients must be a Saskatchewan Resident with a valid HSN who is not covered under Workers Compensation, Saskatchewan Government Insurance, NIHB, VA, or AF. Residents of a Special-care home are not eligible for the methadone care fee.*	00951326
Regulatory Notes	Pharmacists must adhere to the Opioid Agonist Therapy Standards and all provincial/federal regulations related to the dispensing of methadone. Conditions - Prior to releasing OAT medication, **the pharmacist** must assess the patient to ensure they are not at risk of harm through the concurrent ingestion of alcohol, cannabis, or other substances. If the pharmacist believes it is not safe for the patient to receive their OAT, the pharmacist must inform the patient and consult with the prescriber as soon as possible and document the outcome of the dialogue and include it within the patient record. - A pharmacist or pharmacy technicians who is registered and licensed by SCPP must be present to release OAT medication to a patient. This cannot be delegated to any other pharmacy support staff. - The pharmacist or pharmacy technician must directly observe the patient ingesting the medication. After ingestion engage the patient in conversation or provide with an equivalent amount of water to consume to confirm ingestion. - Release of dosages to spouses, relatives, friends is not permitted unless an arrangement has been confirmed between the prescriber, the patient, and confirmed to the pharmacy in writing by the			

Ministry of Health, Drug Plan and Extended Benefits Branch (DPEBB)
Funded Professional Services in Saskatchewan (updated August 2, 2026)

	prescriber - Delivery of OAT to a patient's residence is not permitted except in exceptional circumstances and confirmed by the prescriber in writing in accordance to the *Narcotic Control Regulations*, SCPP guidelines and policies, CPSS OATP Standards and Guidelines and any future directives Documentation & Communication - Must document the assessment of the patient and if provided the observation of dose ingested, and if provided, receipt of take-home doses. See Appendix 14 & 15 (OAT Standards) for sample Patient Record of Witnessed OAT Medication - The pharmacist must notify the prescriber of any missed doses, when known, before the next scheduled release of medication. All reports of missed doses must be documented on the patient's profile and communicated to the prescriber, regardless of cause, duration or number.			
Buprenorphine/ Naloxone (Suboxone) for Opioid Use Disorder	The DPEBB will pay community pharmacies when a pharmacist performs managed care and follow-up services to eligible patients in-person. The DPEBB will pay community pharmacies an off-site fee when the pharmacy employs a nurse to perform managed care and follow-up services to eligible patients in-person.	Up to a maximum of 7. This is the number of times the pharmacist witnesses the patient taking the drug that week. For both on and off-site managed care fee for face-to-face interactions between the patient and the pharmacist per week.	$7.50 per witness (max $52.50 a week) billed weekly ****Patients must be a Saskatchewan Resident with a valid HSN who is not covered under Workers Compensation, Saskatchewan Government Insurance, NIHB, VA, or AF. Residents of a Special-care home are not eligible for the Suboxone care fee*	00951328
Regulatory Notes	Pharmacists must adhere to the Opioid Agonist Therapy Standards and all provincial/federal regulations related to the dispensing of methadone. Conditions - Prior to releasing OAT medication, **the pharmacist** must assess the patient to ensure they are not at risk of harm through the concurrent ingestion of alcohol, cannabis, or other substances. If the pharmacist believes it is not safe for the patient to receive their OAT, the pharmacist must inform the patient and consult with the prescriber as soon as possible and document the outcome of the dialogue and include it within the patient record. - A pharmacist or pharmacy technicians who is registered and licensed by SCPP must be present to release OAT medication to a patient. This cannot be delegated to any other pharmacy support staff. - The pharmacist or pharmacy technician must directly observe the patient ingesting the medication. After the tablets are dissolved, ask the patient to lift up their tongue for observed confirmation that the tablets are no longer present. - Release of dosages to spouses, relatives, friends is not permitted unless an arrangement has been confirmed between the prescriber, the patient, and confirmed to the pharmacy in writing by the prescriber - Delivery of OAT to a patient's residence is not permitted except in exceptional circumstances and confirmed by the prescriber in writing in accordance to the *Narcotic Control Regulations*, SCPP guidelines and policies, CPSS OATP Standards and Guidelines and any future directives Documentation & Communication - Must document the assessment of the patient and if provided the observation of dose ingested, and if provided, receipt of take-home doses. See Appendix 14 & 15 (OAT Standards) for sample Patient Record of Witnessed OAT Medication - The pharmacist must notify the prescriber of any missed doses, when known, before the next scheduled release of medication. All reports of missed doses must be documented on the patient's profile and communicated to the prescriber, regardless of cause, duration or number.			
Take Home Naloxone (THN)	**Participating pharmacies** will be remunerated for providing publicly funded THN kits to individuals at risk of experiencing an opioid overdose or those likely to witness and need to respond to an opioid overdose. The THN fee remunerates pharmacy for all the activities/expenses related to the provision of the service (e.g. client assessment, client training, data tracking documentation).	THN public kits are intended for individual use. A pharmacy can bill **ONLY** publicly funded THN kits obtained through the THN program.	$15.00 ****Patients must be a Saskatchewan Resident with a valid HSN who is not covered under Workers Compensation, Saskatchewan Government Insurance, NIHB, VA, or AF.*	00951510 Public THN kits should be billed under the pseudoHSN: 999 999 982

Regulatory Notes	Conditions - Naloxone hydrocholoride injection when indicated for emergency use for opioid overdose is unscheduled in Saskatchewan. Take Home Naloxone Kits are available for sale without a prescription and may be distributed in locations outside of a pharmacy. - Standards of Practice require proper education and training be provided for any sale of THN kits. The education and training requirements of the THN program align with the SCPP standards of practice. - If a pharmacy does not carry THN kits, they must ensure that they refer patients and the public to locations that do, whether that is another community pharmacy or another community based organization.
